How about a water testing internship for your favorite student?

Do you have a child or grandchild interested in natural resources or water science? We have a grant to fund upstream and in-lake water testing through 2023. We test monthly for excess nutrients and pollutants, analyze water flow data,

oxygen levels and clarity, and perform a semi-annual aquatic invertebrate index, all in support of the 10-year EPA approved plan to clean up our watershed.

We use the latest technology to measure and report water quality and have been in the water for four years providing baseline data to support improvement of our lakes and the upstream watershed that feeds them. We work hand-in-hand with the DNR and county land & water department.

We want to encourage our younger generations to be an active part of our lakes recovery. The grant will provide a good hourly wage, cover their testing expenses, and provide training. Testing involves a few days each month on a regular schedule in the Rome/Leola area.

This is a great opportunity for a student planning to enter a water science program, or currently engaged in a water science program, providing actual field experience to supplement classroom education.

Our program received the state DNR Secretary/Directors award for a citizens group best representing the DNR vision for water quality. Also, if you would like to assist in our water test program as a citizen volunteer, let us know.
